

The convenience and simplicity of cloud-based solutions with the safety, security and IP data protection of an on-premise system.

With the availability of our on-premise hardware and embedded software, Prophecy IoT comes complete as a turn key plug and play Industrial IoT system – on premise with the convenience and simplicity of the cloud - without the risk.

## What the Prophecy On-Premise Zero Maintenance IoT Solution provides:

- Optimized industrial server hardware
- Microsoft Windows Server 2016
- Preloaded, configured, and tuned for Prophecy IoT software
- Ready to securely plug and play on your network
- Active Directory connectivity to your enterprise for Single Sign-On (SSO)
- Microsoft IIS for secure web server access to Prophecy (SSL)
- Database connection to your MS SQL server for your Prophecy IOT Data
- Scheduled Systems backup and recovery
- Secure VPN remote access for support
- Remote 'cloud level' monitoring of the on-premise hardware
- Proactive service and support response
- Failed hardware exchange and support
- Scheduled software updates (on your schedule)
- Planned hardware refresh for Lifecycle Management

## Optional Hardware and Services Upgrades

- High availability and redundancy
- Cold/ Warm / Hot standby options

## Key Benefits

- Fast deployment
- Minimal or no IT local resource support needed
- No upfront capital hardware investment
- Lifecycle Management of hardware
- Dedicated system for Prophecy IoT. No other apps or programs to install / maintain
- Easier maintenance with updates and Patch management
- Direct and secure VPN connections
- Your IP protected as its on your site and not in the cloud
- Your data is stored on your SQL server

## Because Product Lifecycle Matters

Part of ensuring the ongoing success of our customers is being mindful of the lifecycle of the components that we choose to integrate into our systems. Our Product Management team takes great care to ensure that we can offer embedded lifecycles of 3-5 years on our hardware solutions. We go one step farther by monitoring product availability and notifying you in advance when our vendors make End-of-Life (EOL) announcements about key components.
